

INTRODUCING OUR NEW

BODY OF WORK

INDUSTRIAL SERIES

This new lightweight van body from ITB was designed for the rough roads, for the long-hauls, for the day in and day out grinds you need it for. Plus, it's competitively priced so you can add to your fleet while keeping an eye on your bottom line.

Top-quality performance and tough like the day is long - this body more than just delivers the goods.

YOU CAN PUT THIS BODY TO WORK

International Truck Body has been building high-quality aluminum truck bodies since 1972 and our tradition of innovation and quality continues today. We use the best materials and finest craftsmanship in all of our aluminum dry-freight trucks. And, we stand behind our products by offering an industry-leading two-year limited warranty on our Industrial Series of dry freight truck bodies.

PURE STRENGTH

Durable materials, innovative design, and an attention to detail. Not only do we build it, International Truck Body builds it better – and building strong truck bodies is something that we know a lot about... after all we have been doing it for 43 years. By combining top quality design and construction techniques with the best materials available, we are able to manufacture a truck body worthy of carrying the contents you'll be transporting.

Heavy-duty cast aluminum upper corner caps also offer superior impact resistance. These proprietary caps add structural integrity to our front assembly; they don't just cover the hole. The ITB Industrial caps also overlap all mating surfaces making replacement easy and fast.

The world's smallest recessed LED clearance lights plus a sealed wiring harness with a return ground wire result in the most damage resistant, reliable clearance/marker lights in the industry.

Our 12" extruded aluminum front radius is the stiffest, most impact resistant, and most aerodynamic in the industry. Put an ITB Industrial van body next to another brand after both have been in service for five years and you'll see the advantage an extrusion has over a rolled piece of skin.

Extruded aluminum front corner posts also provide superior impact resistance and a strong structural attachment to the side assemblies for a stiffer, stronger front end.

DOWN TO THE DETAILS

When it comes to the details, the ITB Industrial Series leaves nothing to chance. By offering more standard features than our competitors with no additional cost, we ensure that you get the best value for your next truck body.

What the rest tack on as expensive extras our Industrial Series includes standard:

- Domestically harvested oak hardwood floor
- Translucent fibreglass roof
- Stainless steel rear frame
- Full 12" extruded aluminum front radius with recessed LED lights
- Vertical posts 16" on centre

All of our rear frames are stainless steel because even the best paint job will chip and flake from use and abuse through the rear door opening. It's all about the details.

A translucent fibreglass roof improves visibility in the truck box and is designed to withstand years of harsh weather conditions.

ABSOLUTE QUALITY

In addition to the features listed above, every ITB Industrial body is built with the following features:

- Five front vertical stiffeners plus two stiffeners integrated into the extruded corner posts provide a rigid front end

whether you are heading into the wind or restraining a load from the inside.

· All ITB Industrial van bodies use a consistent 2" rivet pattern on the sides and front for drum tight construction. Our sides and front are manufactured on a state of the art automated machine that punches the holes, feeds the rivets, and sets the rivets in one action.

With every truck body we have built over the past 43 years, our customers expect quality, durability and attention to detail. This tradition continues to be our main focus with the Industrial Series of truck bodies.

We know everyone wants peace of mind, that's why we have you covered.
